

Science - Keeping Healthy

This week we are going to be thinking about The Body. Our bodies are truly amazing. Today we are going to learn about what is inside our body and how it helps us to function.

Science - Keeping Healthy

Imagine that you did not have a skeleton. What do you think you would look like? How would your body work differently?

Suggested Activities

1. Ask someone at home to draw around your body (you could do this outside with chalk or inside on some old wrapping paper or wallpaper). Now add some of the major organs and label them.

You could draw them on separate pieces of paper and turn it into a game of, 'pin the organ on the body'.

2. Make a split pin moving skeleton. Think about where your body bends. This is usually where two bones meet to make a 'joint'. There are some free printable skeleton cut outs here:

Art - X-rays!

Don't forget to share your work with us on Class DoJO!

Use cotton buds or strips of paper to form the bones of your skeleton. You can also use paint or chalk to make parts of your picture stand out. Look carefully at these examples. What do you notice about how the paint/chalk has been used?
